Lecture 6

Multidimensional Arrays

- Thus far, you have used one-dimensional arrays to model linear collections of elements.

- You can use a two-dimensional array to represent a matrix or a table.

- Example, table that describes the distances between the cities

Distance Table (in miles)

	Chicago	Boston	New York	Atlanta	Miami	Dallas	Houston
Chicago	0	983	787	714	1375	967	1087
Boston	983	0	214	1102	1763	1723	1842
New York	787	214	0	888	1549	1548	1627
Atlanta	714	1102	888	0	661	781	810
Miami	1375	1763	1549	661	0	1426	1187
Dallas	967	1723	1548	781	1426	0	239
Houston	1087	1842	1627	810	1187	239	0

```
double[][] distances = {
   {0, 983, 787, 714, 1375, 967, 1087},
   {983, 0, 214, 1102, 1763, 1723, 1842},
   {787, 214, 0, 888, 1549, 1548, 1627},
   {1375, 1763, 1549, 661, 0, 1426, 1187},
   {967, 1723, 1548, 781, 1426, 0, 239},
   {1087, 1842, 1627, 810, 1187, 239, 0}
};
```

NYU

- Declare array ref var
- `dataType[][] refVar;`

- Create array and assign its reference to variable
- `refVar = new dataType[10][10];`

- Combine declaration and creation in one statement
- `dataType[][] refVar = new dataType[10][10];`

- Alternative syntax
- `dataType refVar[][] = new dataType[10][10];`

```
int[][] matrix = new int[10][10];
  or
int matrix[][] = new int[10][10];

matrix[0][0] = 3;

for (int i = 0; i < matrix.length; i++)
  for (int j = 0; j < matrix[i].length; j++)
    matrix[i][j] = (int)(Math.random() * 1000);

double[][] x;
```

```
         [0][1][2][3][4]
    [0]  | 0 | 0 | 0 | 0 | 0 |
    [1]  | 0 | 0 | 0 | 0 | 0 |
    [2]  | 0 | 0 | 0 | 0 | 0 |
    [3]  | 0 | 0 | 0 | 0 | 0 |
    [4]  | 0 | 0 | 0 | 0 | 0 |

matrix = new int[5][5];
```

```
         [0][1][2][3][4]
    [0]  | 0 | 0 | 0 | 0 | 0 |
    [1]  | 0 | 0 | 0 | 0 | 0 |
    [2]  | 0 | 7 | 0 | 0 | 0 |
    [3]  | 0 | 0 | 0 | 0 | 0 |
    [4]  | 0 | 0 | 0 | 0 | 0 |

matrix[2][1] = 7;
```

```
         [0][1][2]
    [0]  | 1 | 2 | 3 |
    [1]  | 4 | 5 | 6 |
    [2]  | 7 | 8 | 9 |
    [3]  | 10| 11| 12|

int[][] array = {
    {1,  2,  3},
    {4,  5,  6},
    {7,  8,  9},
    {10, 11, 12}
};
```

matrix.length? 5

matrix[0].length? 5

array.length?   4

array[0].length? 3

- You can also use an array initializer to declare, create and initialize a two-dimensional array.

- Example:

```
int[][] array    int[][] array = new int[4][3];
  = {
  {1, 2, 3},     array[0][0] = 1; array[0][1] = 2; array[0][2] = 3;
  {4, 5, 6},     array[1][0] = 4; array[1][1] = 5; array[1][2] = 6;
  {7, 8, 9},     array[2][0] = 7; array[2][1] = 8; array[2][2] = 9;
  {10, 11, 12}   array[3][0] = 10; array[3][1] = 11; array[3][2] = 12;
};
```

- `int[][] x = new int[3][4];`

```
x ─────────────┐
                ↘ ┌──────┐        ┌─────────┬─────────┬─────────┬─────────┐
  x[0]            │      │───────▶│ x[0][0] │ x[0][1] │ x[0][2] │ x[0][3] │   x[0].length is 4
                  ├──────┤        └─────────┴─────────┴─────────┴─────────┘
  x[1]            │      │───────▶│ x[1][0] │ x[1][1] │ x[1][2] │ x[1][3] │   x[1].length is 4
                  ├──────┤        └─────────┴─────────┴─────────┴─────────┘
  x[2]            │      │───────▶│ x[2][0] │ x[2][1] │ x[2][2] │ x[2][3] │   x[2].length is 4
                  └──────┘        └─────────┴─────────┴─────────┴─────────┘
x.length is 3
```

```
int[][] array = {
   {1, 2, 3},
   {4, 5, 6},
   {7, 8, 9},
   {10, 11, 12}
};

array.length

array[0].length
array[1].length
array[2].length
array[3].length
array[4].length ArrayIndexOutOfBoundsException
```
NYU

- Each row in a two-dimensional array is itself an array.
- The rows can have different lengths. Such an array is known as a **ragged array**.
- Example:

```
int[][] matrix = {
{1, 2, 3, 4, 5},
{2, 3, 4, 5},
{3, 4, 5},
{4, 5},
{5}
};
```

```
matrix.length is 5
matrix[0].length is 5
matrix[1].length is 4
matrix[2].length is 3
matrix[3].length is 2
matrix[4].length is 1
```

```
int[][] triangleArray = {
    {1, 2, 3, 4, 5},
    {2, 3, 4, 5},
    {3, 4, 5},
    {4, 5},
    {5}
};
```

| 1 | 2 | 3 | 4 | 5 |

| 2 | 3 | 4 | 5 |

| 3 | 4 | 5 |

| 4 | 5 |

| 5 |

- Initializing arrays with input values
- Printing arrays
- Summing all elements
- Summing all elements by column
- Which row has the largest sum
- Finding the smallest index of the largest element
- Random shuffling

```java
java.util.Scanner input = new Scanner(System.in);
System.out.println("Enter " + matrix.length + " rows and " +
   matrix[0].length + " columns: ");
for (int row = 0; row < matrix.length; row++) {
   for (int column = 0; column < matrix[row].length; column++) {
      matrix[row][column] = input.nextInt();
   }
}
```

```
for (int row = 0; row < matrix.length; row++) {
  for (int column = 0; column < matrix[row].length;
column++) {
    matrix[row][column] = (int)(Math.random() * 100);
  }
}
```

```java
for (int row = 0; row < matrix.length; row++) {
  for (int column = 0; column < matrix[row].length;
column++) {

    System.out.print(matrix[row][column] + " ");

  }

  System.out.println();
}
```

```
int total = 0;
for (int row = 0; row < matrix.length; row++) {
   for (int column = 0; column < matrix[row].length;
column++) {
      total += matrix[row][column];
   }
}
```
```
for (int column = 0; column < matrix[0].length; column++)
{
  int total = 0;
  for (int row = 0; row < matrix.length; row++)
    total += matrix[row][column];
  System.out.println("Sum for column " + column + " is "
    + total);
}
```
```
for (int i = 0; i < matrix.length; i++) {
  for (int j = 0; j < matrix[i].length; j++) {
    int i1 = (int)(Math.random() * matrix.length);
    int j1 = (int)(Math.random() * matrix[i].length);
    // Swap matrix[i][j] with matrix[i1][j1]
    int temp = matrix[i][j];
    matrix[i][j] = matrix[i1][j1];
    matrix[i1][j1] = temp;
  }
}
```

`double[][] image = new double[6][4];`
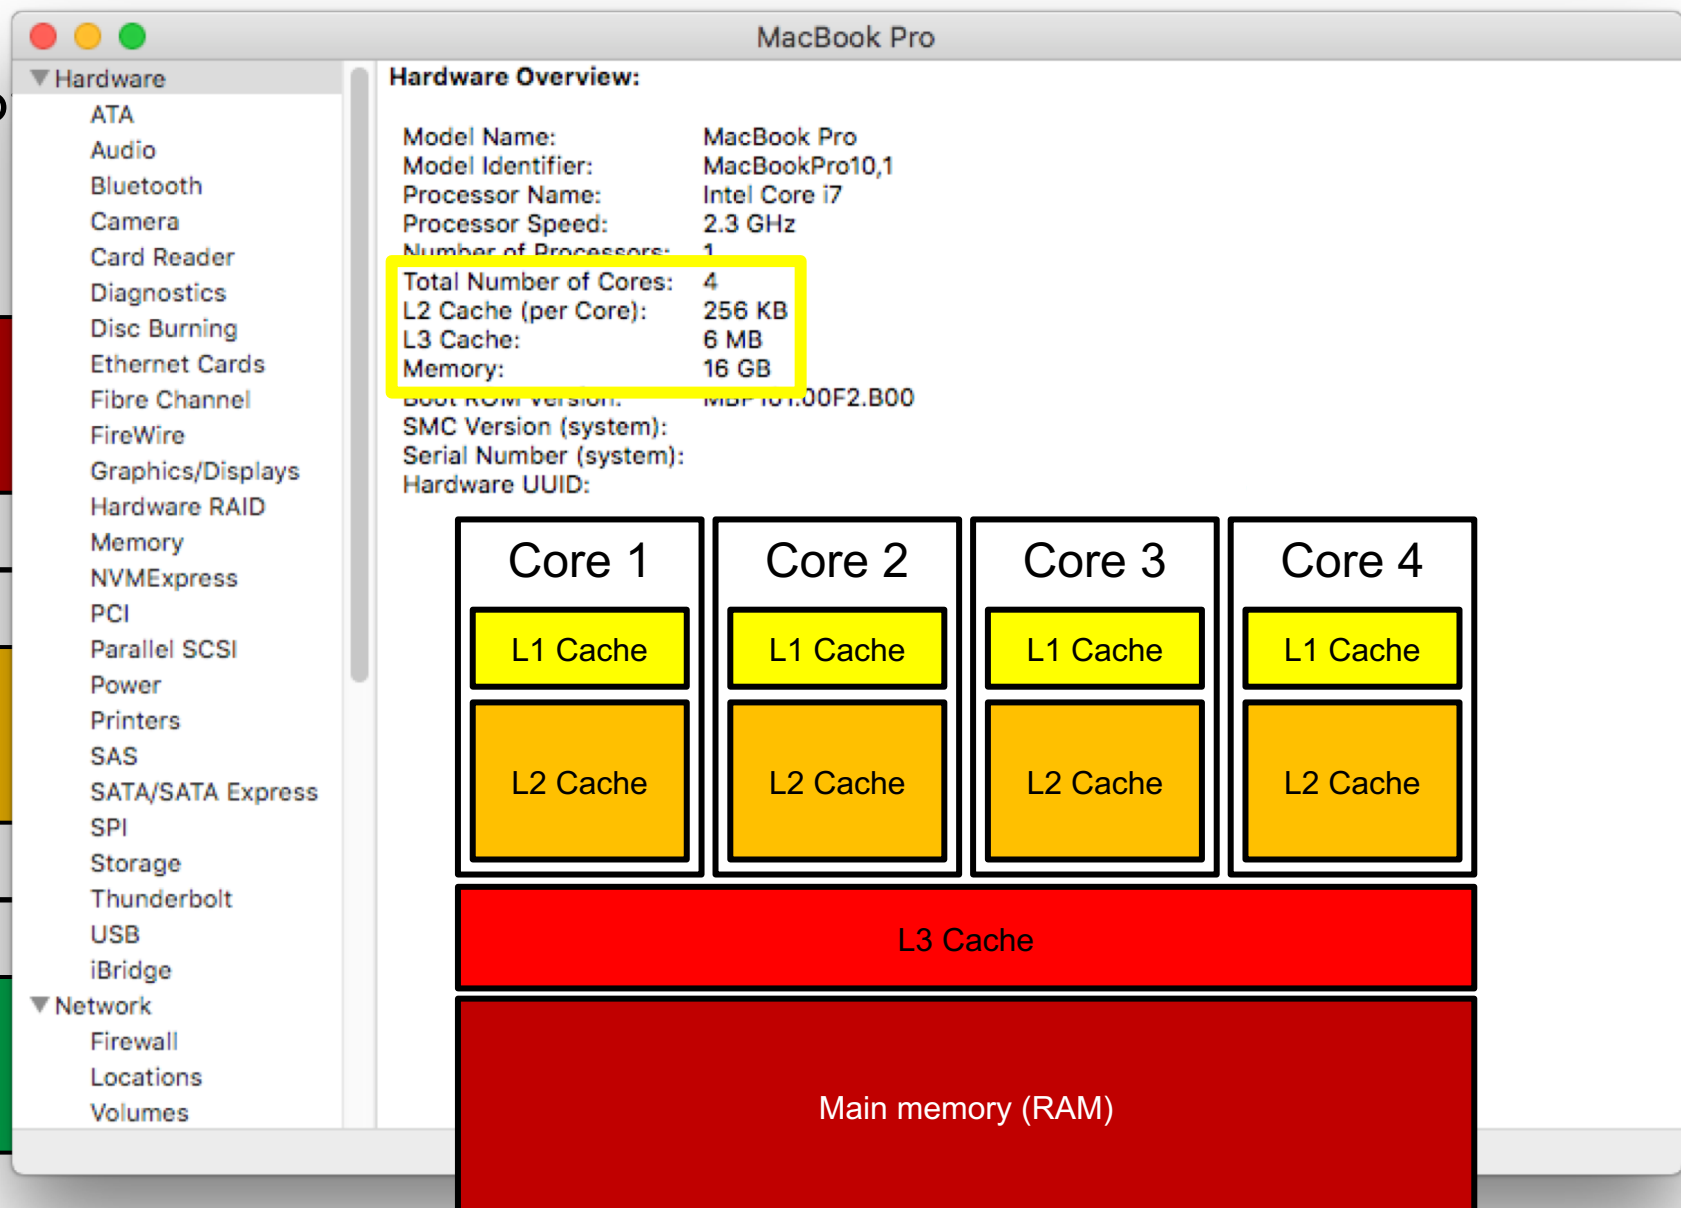

```
double[][] image = new double[6][4];
```
```
double[][] image = new double[6][4];
```

do

MacBook Pro

Hardware Overview:

Model Name: MacBook Pro
Model Identifier: MacBookPro10,1
Processor Name: Intel Core i7
Processor Speed: 2.3 GHz
Number of Processors: 1
Total Number of Cores: 4
L2 Cache (per Core):   256 KB
L3 Cache: 6 MB
Memory: 16 GB
Boot ROM Version: MBP101.00F2.B00
SMC Version (system):
Serial Number (system):
Hardware UUID:

Core 1	Core 2	Core 3	Core 4
L1 Cache	L1 Cache	L1 Cache	L1 Cache
L2 Cache	L2 Cache	L2 Cache	L2 Cache

L3 Cache

Main memory (RAM)

```
double[][] image = new double[4][6];
double c = image[0][0];
```

NYU

- Occasionally, you will need to represent n-dimensional data structures.

- In Java, you can create n-dimensional arrays for any integer n.

- The way to declare two-dimensional array variables and create two-dimensional arrays can be generalized to declare n-dimensional array variables and create n-dimensional arrays for n >= 3.

```
double[][][] scores = {
   {{7.5, 20.5}, {9.0, 22.5}, {15, 33.5}, {13, 21.5}, {15, 2.5}},
   {{4.5, 21.5}, {9.0, 22.5}, {15, 34.5}, {12, 20.5}, {14, 9.5}},
   {{6.5, 30.5}, {9.4, 10.5}, {11, 33.5}, {11, 23.5}, {10, 2.5}},
   {{6.5, 23.5}, {9.4, 32.5}, {13, 34.5}, {11, 20.5}, {16, 7.5}},
   {{8.5, 26.5}, {9.4, 52.5}, {13, 36.5}, {13, 24.5}, {16, 2.5}},
   {{9.5, 20.5}, {9.4, 42.5}, {13, 31.5}, {12, 20.5}, {16, 6.5}}
};
```

Which student   Which exam   Multiple-choice or essay

```
scores[ i ] [ j ] [ k ]
```
